Control Centre**

A disease you need to know about

Tuberculosis is an **illness caused by a microbe** that can affect different parts of the body. Pulmonary tuberculosis is the most common form and is contagious. An effective treatment is available.

The symptoms of tuberculosis may appear a **few weeks or months** after the person becomes contagious. **An X-ray** can detect the disease as soon as it begins to develop.

Possible symptoms

Cough lasting more
than 3 weeks

Phlegm or even coughing up
blood

Chest pain

Difficulty breathing

Unusual fatigue

Weight loss

Loss of appetite

Night sweats

Fever

Appearance of a lump
(e.g., at the base of the neck)

→ **Screening is
free of charge**
